

CHEMICAL

Aluminium sulfate solutions for the liquid cement industry

THE APPLICATION SCOPE / PURPOSE

Aluminum sulfate is a typical additive in the production of cement for the construction industry. Aluminum sulfates are used to increase the viscosity of the concrete mass, to prevent sediment deposition and to prevent dripping from the wall. Aluminum sulfate can be added to the rest of the mass as a powder or liquid. Kinematica has experience in the controlled, continuous addition of the additive and in the preparation of this additive solution. This should be free of lumps and efficiently integrated into the process.
