LIFE SCIENCE

Production of barium sulfate contrast agent for medical X-ray images

THE APPLICATION SCOPE / PURPOSE

Contrast agents are used in the medical field for imaging methods such as X-rays. The contrast medium is intended to provide additional information, so that X-rays are absorbed more strongly than in normal tissue. Barium sulfate is orally given to the patient in the form of an emulsion and is used for imaging the esophagus, stomach, small and large intestine. Kinematica has experience in the production of contrast agents with barium sulphate and offers solutions with appropriate temperature control.
